Preguntas frecuentes sobre la prueba Traceroute

Uso de la herramienta Traceroute

Esta herramienta se utiliza normalmente para diagnosticar fallos o interrupciones en la transferencia de datos e identificar el punto exacto de la cadena donde se produjeron. Este traceroute IPv4 o IPv6 es único, ya que permite probar simultáneamente diferentes ubicaciones. Esto permite **determinar rápidamente si existe pérdida de paquetes o latencia inesperada** en la IP o el nombre de host especificados. Una CDN puede [reducir drásticamente la latencia](#) al minimizar la distancia entre saltos.

¿Qué es Traceroute?

Traceroute , también conocido como tracert, es una utilidad que utiliza paquetes [ICMP](#) para registrar la ruta a través de internet entre dos ordenadores. Calcula el tiempo que tarda cada salto en enrutar el paquete hasta su destino. Para garantizar la precisión, se consulta cada salto varias veces (en este caso, cuatro) para medir mejor su respuesta.
